KEY INSIGHTS

- 74% of records (1,221 of 1,650) are below the average sales amount, because a few high-value records pull the average up.
- Footfall and sales show almost no relationship (correlation ≈ 0.08), so high traffic alone does not guarantee higher sales.
- Electronics contributes about 84.5% of total sales, while Store C has the highest sale(about 22.6M).
